Profile

I am a highly skilled Civil Quality Control (QC) Engineer with over 12 years of extensive experience in the construction industry in Saudi Arabia, ensuring the highest standards of quality across diverse projects. Throughout my career, I have been directly responsible for overseeing comprehensive quality control procedures, conducting in-depth site inspections, and ensuring full compliance with industry regulations and client specifications.

My expertise spans all phases of construction, including earthworks, structural and concrete works, precast and prestressed elements, finishing, and plumbing, where I focus on preventing defects and maintaining exceptional standards of workmanship. I am deeply involved in hands on quality management, ensuring that every detail of the construction process is executed to perfection.

I have successfully managed and supervised quality control for a wide variety of projects, including residential, industrial, healthcare, and large-scale earthworks. My experience with top tier contractors such as Al Rashid and Al Rashid Abetong Saudi Arabia, SASROCK Contracting Saudi Arabia, RTC General Contracting Saudi Arabia, and Hajvairy Contracting has allowed me to contribute to the successful completion of complex projects while maintaining strict adherence to budget and schedule constraints.

My primary focus is on identifying potential quality risks early in the process, implementing preventive measures, and fostering continuous improvement in every aspect of construction. I am committed to ensuring that all projects I manage not only meet but exceed client expectations, delivering results with integrity and precision.

Approved by **SABIC** and **NEOM**.

Education

- **B.Sc. Civil Engineering** CECOS University, Pakistan 2009 - 2013
- **F.Sc. Pre-engineering** Public School, Pakistan 2008 - 2009

Professional Experience

Sasrock Contracting, Mining and Construction | Saudi Arabia

QC Civil Engineer (Oct 2024- Present)

- Raise and process Material Inspection Requests (MIRs) for survey, geotechnical, and civil works, ensuring that all submissions are processed quickly and reviewed by both consultants and clients to avoid project delays.
- Verify and obtain approvals for materials like granular fill, non-woven geotextile fibers, and subgrade materials by ensuring compliance with project specifications, making sure they meet quality and safety standards before use.
- Review project specifications to identify key technical and quality requirements, and communicate them to the site execution team to ensure alignment with project standards and quality expectations.
- Assist clients and consultants during site inspections, providing regular updates and organizing site visits for ongoing and near-completion activities, ensuring transparency and keeping the project on track for timely completion.
- Identify non-conforming materials or work, raise Inspection Non-Conformance Reports (INCRs), and coordinate corrective actions with the site team to resolve issues effectively.
- Provide on-site guidance to the execution team on compaction methods, material placement, and quality-related challenges, ensuring proper techniques are followed to avoid delays or rework.
- Ensure compliance with backfill layer thickness, compaction techniques, and slope stability/alignment of embankments to meet project guidelines and ensure structural Monitor and enforce testing frequencies for key activities, such as soil and compaction tests, to guarantee that all critical project requirements are met throughout the construction process.
- Conduct stockpile inspections at required intervals (every 3000 m³ for soil classification and every 5000 m³ for CBR and chemical tests) to confirm that materials meet specifications.
- Arrange and supervise nuclear gauge Field Density Tests (FDT) to ensure compaction meets project standards (95%–98% of MDD) for critical layers.
- Coordinate with third-party laboratories and testing agencies to ensure timely and accurate testing for project materials, confirming that all materials are up to specification and quality standards.
- **Projects**
 - Golf Course Trojena, Neom

AL Rashid Trading and Contracting | Saudi Arabia

QC Civil Engineer (June 2018 - July 2024)

- Played a key role in ensuring all project quality requirements were clearly defined and adhered to by reviewing detailed quality plans and inspection protocols, aligning them with the project specifications, industry standards, and client expectations.
- Oversaw day-to-day quality control operations, ensuring all construction processes followed strict quality guidelines, including conducting on-site surveillance inspections to verify work was completed according to project drawings and contractual agreements.
- Monitored key stages of construction and managed critical inspection and hold points, ensuring compliance with Inspection and Test Plans (ITPs) to confirm that each phase met quality benchmarks before proceeding.
- Regularly contributed to quality assurance meetings, presenting detailed reports on ongoing quality control activities, RFIs, RMIs, NCRs, and any quality-related issues, ensuring prompt resolution and effective addressing of concerns.
- Acted as a trusted advisor on technical matters, guiding project teams on applicable standards, specifications, and regulatory requirements, ensuring consistent delivery of work to the highest quality standards.
- Oversaw vital construction activities, such as excavation, foundations, steel fixing, and other civil works, ensuring seamless coordination between subcontractors and adherence to quality specifications within the project timeline.
- Worked closely with project managers, contractors, and subcontractors to resolve technical and quality challenges, using a collaborative approach to ensure quick resolution and prevent delays.
- Tracked and managed NCRs, implementing corrective and preventive actions to address quality issues, driving continuous improvement in construction practices.
- Coordinated key construction activities, ensuring compliance with project specifications and timelines, through detailed planning, frequent site inspections, and collaboration with stakeholders to keep projects on schedule.

Projects

- Jawaharat Mall, Riyadh
 - SABIC Mutrafiah Housing Project, Jubail
 - Security Forces Medical Center (SFMC), Riyadh
 - MOI Housing Project, Salwa
 - Ministry of Housing Project, Riyadh and Yanbu
 - MOFA Buildings

RTC General Contracting | Saudi Arabia

Civil Site Engineer (July 2015 - June 2018)

- Oversee every stage of the project, from breaking ground to the final finishing ensuring all tasks are completed smoothly and the site is handed over without any loose ends.
- Monitoring key operations like excavation, backfilling, compaction, correct placement and grade of concrete, blockwork, gypsum board installation, waterproofing, plumbing works, painting, tiling, epoxy painting, and epoxy flooring to ensure quality and progress.
- understand and highlighting important structural components like beams, beam connections, foundations, retaining wall details, reinforced walls and columns in drawings to ensuring proper alignment and making sure columns end where they should at the right floors.
- Marking and verifying levels, alignments, and positions of steel dowels for slab, stairs, beams, canopies and precise measurements and positioning of stud bolts, plates and other embedded items
- Marking the level of structural elements that is floor, slabs, beams, stairs and columns
- Estimations of tiles, blocks, steel reinforcement, false ceilings, paint, waterproofing, and raised floors to ensure everything is accounted for.
- Carefully checking formwork for proper alignment, and sealability to avoid leaks or failures during casting.
- Supervising concreting activities, staying on-site until the pour and finishing are done to ensure everything meets quality standards.
- Preparing detailed plans for ongoing work at least two weeks ahead to avoid delays and ensure readiness.
- Staying aware of materials on-site, track usage, and ensure that everything needed for upcoming work is available in advance.
- Holding weekly meetings with steel foremen, shuttering foremen, labor foremen and general foremen to review progress, address slowdowns, and assign upcoming activities.

Projects

- Construction of Precast 380kv Alstom Grid GE Substation, Jazan
- Construction of Al-Mashariq 110kv Substation, Makkah
- Construction of ABB Contracting 115kv Substation, Yanbu

Hajvairy General Contractors | Pakistan

Site Engineer (June 2013 - May 2015)

- Supervised concreting for structural elements, ensuring compliance with engineering specifications and quality standards.
- Managed excavation, backfilling, and bar bending schedules, ensuring accuracy and adherence to safety protocols.
- Monitored subcontractor work and tracked daily site activities, ensuring project tasks were completed according to specifications.
- Raised RFIs and RMIs to address technical queries and ensured timely procurement of materials.
- Assisted consultants during inspections, providing necessary documentation and clarifications.

Project

- Multiple High-Rise Buildings, Islamabad
-

Certifications & Approvals

- ISO 9001:2015 IRCA-CQI Certified
 - NEOM Approved Engineer
 - SABIC Approved Engineer
 - Saudi Engineering Council (SCE) Registered
-

Key Skills

- Quality Control & Assurance (QA/QC)
- Material Inspection & Testing (MIRs, ITPs, NCRs, FDTs)
- Earthworks, Backfilling & Compaction Compliance
- Structural & Concrete Works Supervision
- Precast & Prestressed Concrete Elements
- Technical Report Writing & Documentation
- Site Audits & Non-Conformance Resolution
- ISO 9001:2015 Implementation & Compliance Client & Consultant Coordination
