EDUCATION

University of Sindh

Bachelor's in Information Technology

Jan 2016 – Feb 2020

Sindh, Pakistan

SKILLS

Networking: Routing, Switching, VLANs, Subnetting

Firewalls: Packet Filtering, IPS/IDS, NAT, Network Access Control

Load Balancers: Traffic Distribution, Health Checks, SSL Offloading, Session Persistence

Security: IPSec, L2 VPN, L3 VPN, Port Security, ACLs

Automation: Python, Ansible, Bash, PowerShell

Tools: SolarWinds, Wireshark, Putty, SecureCRT

EXPERIENCE

Gexton Software Pvt. Ltd

Jan 2023 – Jan 2025

Jr. Network Engineer & Security

- Configured and troubleshooted routing protocols including EIGRP, OSPF, BGP, MPLS, and RIP, ensuring 99.99% uptime and optimizing network performance
- Configured and maintained Layer 2 switching technologies including STP, RSTP, and VTP, improving network stability
- Implemented firewall policies using packet filtering, NAT, and access control lists (ACLs), reducing external threat exposure by 40%
- Managed and optimized Layer 2/3 network infrastructure, including VLANs and subnetting, for over 150 endpoints.
- Configured and maintained Fortinet firewalls with active IPS/IDS monitoring, improving incident response time by 60%.
- Deployed and managed F5 load balancers to ensure 99.9% service uptime
- Led the integration of IPSec, L2 VPN, and L3 VPN connections for secure inter-branch communication, reducing latency by 25%.
- Automated routine network tasks using Python and Ansible, saving approximately 10+ hours/week in manual work.
- Used SolarWinds and Wireshark for real-time network monitoring and diagnostics, resolving 95% of network issues within SLA.

Sapphire Consulting Pvt. Ltd

Jan 2022 – Dec 2022

Network Support

- Assisted in configuring routers, switches, and access points for small office networks, ensuring proper cabling and power setup.
- Installed and configured hardware and software components, including printers and network cards, reducing setup time by 25%.
- Troubleshooted and resolved hardware/software issues with a 95% success rate, minimizing downtime and maintaining workflow continuity.
- Ensured reliable network access and connectivity, improving overall performance by 30% and reducing connectivity issues by 40%.
- Documented IT support requests, completed tasks, and equipment inventory, streamlining reporting and reducing retrieval time by 20%.

CERTIFICATION

- Cisco Certified Network Associate (CCNA)
- Microsoft IT Support Specialist (Coursera)

PROJECTS

Secure File Encryption & Digital Signature System | Anaconda tool, Python, ML and AI
Jan 2019 – Feb 2020

- **Cryptography Project**
- **Technologies:** Python, AES-256, RSA-2048, ECDSA, SHA-256, X.509 Certificates
- **Implemented:** AES-256 encryption (CFB Mode) for secure file encryption
- **Designed:** RSA-based key exchange mechanism for secure AES key transmission
- **Integrated:** ECDSA digital signatures to ensure data integrity & authenticity
- **Developed:** SHA-256 hashing to verify file integrity against tampering
- **Implemented:** X.509 certificates for authentication of public keys

Human Activity Recognition | Anaconda tool, Python, ML and AI *Jul 2018 – Dec 2018*

- Our aims to perform research on recognizing different indoor human activities from videos through computer vision.
- To discover new hybrid models for HAR, we will review existing HAR approaches from past research papers.
- We could figure out a more efficient hybrid model with good accuracy in performance and results compared to previously found approaches and models.
- After reviewing different papers, we created a hybrid model algorithm, InceptionV3, with CNN layers. This algorithm achieved a training accuracy of 0.99 and a validation accuracy 0.98.
