ABOUT ME

As a Senior Software Engineer with years of industry experience, I specialize in building modern, scalable applications using the MERN stack, complemented by advanced frameworks like Next.js and Nest.js. I thrive on developing high-performance, maintainable solutions while solving complex challenges and pushing the boundaries of web development. With a strong focus on delivering user-centric products and collaborating with cross-functional teams, I turn innovative ideas into functional, production-ready applications. Continuously honing my skills, I stay ahead of industry trends to craft impactful software that drives business success.

PROFESSIONAL EXPERIENCE

Mar 2023 - Dec 2024

Ropstam Solutions

Senior Software Engineer

- Created scalable microservices with Nest.js and integrated databases.
- Boosted SEO and performance with SSR & SSG
- Enhanced user interactions and optimized performance with hooks
- Conducted unit testing with Jest and React Testing Library for QA
- Integrated payment gateways like Stripe for secure transactions.
- Managed application deployment on production environment

Feb 2023 - Mar 2024

DevBatch

Software Engineer

- Built high-performance backends with Node.js and Nest.js.
- Ensured responsive and cross-browser compatible backend components.
- Created responsive UIs using Material-UI and Bootstrap.
- Designed database schemas with MongoDB and PostgreSQL.
- Implemented Redux for state management in React applications.
- Implemented JWT and OAuth for secure authentication.

Oct 2020 - Feb 2023

Synergic Professionals

Software Engineer

- Efficiently handled data mapping and synchronization tasks.
- Specialized in modern frontend development.
- Developed efficient middleware for streamlined request handling.
- Used GraphQL for efficient data querying.
- Designed responsive UIs for optimal performance across devices.
- Implemented reusable components and clean architecture.

SKILLS

- **Languages & Scripting:** HTML, CSS, JavaScript, TypeScript
- **Frontend Libraries:** React.js, Tailwind CSS, MUI, Bootstrap
- **State Management Tools:** Redux (RTK), Zustand, Context API
- **Frontend Frameworks:** Next.js
- **Backend & Server-Side:** Node.js, Express.js, NestJS
- **APIs:** REST APIs, GraphQL, Apollo
- **Databases:** MongoDB, MySQL, PostgreSQL
- **ORMs:** Prisma ORM, Sequelize, TypeOrm
- **Authentication & Security:** JWT Auth, OTP Auth, Social login
- **Code Quality & Testing:** ESLint, Prettier, Jest, RTL
- **Real-Time & Utilities:** WebSockets, Form Handling (React Hook Form), Validation (Yup, Zod)
- **Cloud & Deployment:** Heroku, Vercel, AWS (S3, Cognito, EC2, Lambda), Supabase, Firebase
- **Payment Gateways:** Stripe, PayPal, VIPS
- **Version Control & Collaboration:** GitHub, GitLab
- **Project Management & Tools:** Jira, Trello, ClickUp, Monday.com
- **Miscellaneous Third-Party Integrations:** Twilio, OpenAI, SendGrid, Vimeo, Cloudinary
- **Automation:** Docker, CI/CD (Jenkins, GitHub Pipelines)

PROJECTS

[Almoosa Health Group](#) (Hospital Management Platform)

Vue.js, React.js, NestJS, MySQL, Oracle (Stored Procedures), Twilio, Native Mobile Apps

- Designed and developed a full-featured hospital platform for Almoosa Health Group in KSA, with integrated portals for both patients and doctors.
- Enabled online and onsite appointment bookings with secure payment options and Twilio-based video consultations.
- Built scalable backend services using NestJS, integrated with client-side Oracle stored procedures and MySQL for performance and data reliability.
- Implemented real-time notifications for appointments, prescriptions, vaccinations, and post-consultation follow-ups.
- Developed multilingual support (Arabic & English) and secure authentication with OTP, ensuring accessibility and compliance.
- Delivered native mobile apps and a Vue.js-based web platform, with a React.js appointment module for seamless user experience across devices.
- Provided doctors with tools to manage patient histories, send prescriptions, and track medicine schedules for follow-up care.

[HeyNota](#) (AI-Powered Content Transformation Platform)

Next.js, Node.js, Express.js, PostgreSQL, Docker, Azure, OpenAI, Chrome Extension

- Designed and developed a cutting-edge platform to convert written content into AI-enhanced text, audio, image, and video formats.
- Built intelligent tools (SUM, BRIEF, VID, IMAGE) to generate headlines, summaries, videos, and SEO-optimized assets for publishers.
- Engineered a performant frontend using Next.js 14 with dynamic routing, server-side rendering, and seamless API integration.
- Integrated OpenAI NLP models for content summarization, keyword extraction, entity recognition, and media enrichment.
- Developed a Chrome extension and CMS plugins to allow users direct access to Nota tools within their editorial workflows.
- Deployed microservices using Docker and managed infrastructure on Microsoft Azure, with PostgreSQL as the primary relational database.
- Designed and delivered a robust analytics dashboard with real-time graphical insights into content performance and user engagement, empowering data-driven decisions.

[Nurse Nellie](#) (Patient-Clinician Interaction Platform)

Next.js, Supabase, AI APIs, Vercel, Twilio, Multi-Language Support

- Developed Nurse Nellie, a SaaS solution for hospitals and doctors in Australia, providing admin and patient apps with secure user roles (RBAC).
- Enabled clinic registration via credits and subscriptions, with a unique clinic code and QR code for patient access.
- Designed a seamless patient onboarding flow, where patients scan the QR code, answer pre-configured questions, and generate questions for clinicians to ask.
- Automated patient history generation, storing key information and responses in the database for future reference and improved patient management.
- Integrated multi-language support for English and other languages, ensuring accessibility for a wider audience and patients.
- Utilized Twilio OTP for secure user verification and workspaces to allow clinicians and administrators to invite others to join the platform.
- Leveraged Supabase for real-time database interactions, AI APIs for dynamic question generation, and Vercel for efficient deployment and scaling.

Invoicemate (e-Invoicing & Finance Management Platform)

React.js, Node.js, Express.js, MongoDB, Oracle DB, AWS (SES, S3, EC2), Cron Jobs

- Built a secure, scalable multi-tenant invoicing platform with Role-Based Access Control supporting isolated access .
- Implemented a complete invoice lifecycle including creation, email-based vendor alerts, status updates, and workflows
- Automated complex approval chains with built-in escalation paths, revision requests, and time-based decisions
- Developed scheduled cron-jobs to sync records with Oracle DB, ensuring high data integrity, and seamless integration .
- Integrated secure payment handling with dynamic invoice status tracking, real-time notifications, and transactions
- Enabled high-volume document storage through AWS S3 and scalable email communication using AWS services
- Delivered a collaborative e-invoicing system with finance dashboards, user activity logs, and intelligent reporting's

Ceptra (Project Management Tool - C Panel)

React.js, Node.js, Express.js, MongoDB, AWS, Jenkins, Cloudinary

- Built a robust SaaS platform with RBAC to securely manage user roles, team permissions, and project visibility in app.
- Implemented JWT-based authentication with social login support (Google, Facebook) for seamless and secure auth.
- Managed employee hierarchies and roles while tracking project stages—pipeline, in-progress, completed, rejected.
- Designed real-time dashboards to visualize project milestones, team contributions, and employee performance.
- Developed a detailed finance module to calculate project budgets, expenses, overall profit/loss, and historical finances.
- Created a dynamic drag-and-drop UI to customize project pipelines, assign resources, and adjust task priorities feature.
- Deployed the platform on AWS with automated CI/CD via Jenkins, and integrated Cloudinary for optimized uploading.

Pocard (Business Rating & Review Collection Platform)

MongoDB, Express.js, React.js, Node.js, Heroku

- Built a smart review system using NFC-enabled, QR-coded physical cards for quick and effortless feedback collection.
- Integrated Popcards with platforms like Google, Instagram to drive instant, platform-specific reviews and boost profiles.
- Designed a comprehensive dashboard to monitor staff-wise performance, manage card distribution, and tracking
- Enabled ultra-fast, 3-second review submission flow to improve business rankings, credibility, and SEO performance.
- Supported bulk card registration with unique link mapping, allowing easy setup and streamlined assignments
- Added analytics to see customer engagement, track review volume, rating patterns, and identify high-performing staff.
- Deployed the full-stack solution on Heroku, ensuring secure, and efficient delivery of services with minimal overhead.

EDUCATION

Virtual University of Pakistan | 2018-2022

Bachelor of Science in Computer Science

BISE FSD | 2016-2017

Intermediate - FSC

BISE FSD | 2014-2015

Matriculation - Science
