

Experienced Telecom Engineer with a strong background in network implementation, commissioning, and testing across technologies like GPON, DWDM, MSAG, and MSAN. Skilled in site surveys, equipment installation, vendor coordination, and project handover. Proven ability to manage field teams, ensure EHS compliance, and deliver projects on time with proper documentation and customer satisfaction.

PROFESSIONAL
EXPERIENCE

Microwave Engineer FEB-2025 to Present
NEC VENDOR

- Conduct Line-of-Sight (LoS) and site surveys for point-to-point (PTP) or point-to-multipoint (PMP) microwave links.
- Using link budgets,, antenna height, frequency, IP and vlan trucking.
- Supervise or perform installation of microwave hardware: antennas, ODUs, IDUs, waveguides, IF cables, and mounts on towers or rooftops.
- Ensure proper alignment of antennas based on azimuth/elevation angles.
- Conduct VSWR (voltage standing value ratio) testing, grounding checks, and cable loss testing during installation.
- Configure microwave equipment (IDU/ODU) for provisioning of capacity (, VLANs).
- Implement radio protection schemes (1+0, 1+1, XPIC, SD/FD, Space Diversity).
- Set up management interfaces and integrate with NMS systems (WebLCT, etc.)
- Conduct acceptance testing: RSSI (received signal strength indicator) levels, BER (Bit Error Rate), throughput, latency, and availability.
- Perform end-to-end connectivity tests from one node to another.
- Validate redundancy, failover scenarios, and alarm generation.
- Participate in PAT (Preliminary Acceptance Testing) and FAT (Final Acceptance Testing) with the customer/operator.
- Document all test results and configurations for handover.
- Maintain as-built documentation, equipment inventory, and configuration backups.
- Generate reports for project managers or clients, including outage summaries, RCA (root cause analysis), and uptime KPIs.
- Assist in creating standard operating procedures (SOPs) and maintenance schedules.

NETKOM COMMUNICATION FEB 2023 TO AUG 2024
HUAWEI VENDOR

- **Coordination & Communication:**
 - Liaised with vendors and operators to ensure seamless execution of project activities.
 - Coordinated with TNOC (Technical Network Operations Center) and BNOC (Base Network Operations Center) for TCN (Transmission Change Notice) activation related to scheduled activities.
- **Project Execution:**
 - Conducted site surveys and ensured compliance with EHS (Environment, Health & Safety) standards before and during implementation.
 - Managed the end-to-end implementation, commissioning, pre-testing, testing, and migration processes for network elements or infrastructure.
- **Documentation & Handover:**
 - Oversaw preparation and signing of PAT (Pre-Acceptance Test) documents with customers.
 - Maintained accurate documentation to support claim submissions against PO (Purchase Order) line items for each completed activity.

HUAWEI PAKISTAN OCT 2021 TO JAN 2023

L1 SUPPORT ENGINEER

- **GPON Implementation & Configuration:**
- Executed the implementation of GPON OLT (MA5600T) across various sites.
- Performed GPON configuration in alignment with network design and customer requirements.
- Conducted thorough testing and validation of GPON services prior to handover.
- Managed handover and acceptance of completed services with customers.
- **Nationwide Migration Project:**
- Contributed to the migration of MSAG (Multi-Service Access Gateway) to VIMS (Voice over IMS) platform as part of a nationwide project across Pakistan.
- Supported planning, execution, and verification of migration activities, ensuring minimal service disruption and successful cutovers.
- Worked on the implementation of the DWDM (Dense Wavelength Division Multiplexing) 200G Project in the Northern Region of Pakistan.
- Coordinated closely with Huawei internal teams and external suppliers to ensure smooth execution and timely delivery of the project.
- Supported installation, configuration, and testing of DWDM equipment, ensuring high-capacity data transmission and network stability.

LCC PAKISTAN NOV 2018 TO SEP 2021

IMPLEMENTATION MANAGER

- **Team Management:**
- Arranged and organized project teams based on scope and resource requirements to ensure efficient execution.
- **Vendor Communication & Scope Management:**
- Acted as the primary point of contact with vendors, managing communication for new project scopes, deliverables, and support requirements.
- **PO Management & Financial Coordination:**
- Oversaw the clearance and processing of Purchase Orders (POs) in coordination with procurement and finance teams to ensure timely execution of project activities.
- **Resource & Logistics Management:**
- Managed arrangement of tools, equipment, and vehicles for field teams to ensure smooth execution of on-site activities.
- Ensured timely availability of all necessary resources to avoid delays in project timelines.

NETKOM PAKISTAN FEB 2015 TO OCT 2018

SITE ENGINEER

- **Access Network Equipment Handling:**
- Worked on MSAG (Multi-Service Access Gateway) and MSAN (Multi-Service Access Node) equipment during PTCL operations projects.
- **Field Activities & Execution:**
- Conducted site surveys, followed by installation, commissioning, and integration of access network elements.
- Performed pre-PAT (Preliminary Acceptance Testing) and PAT (Final Acceptance Testing) in coordination with PTCL teams.
- **Documentation & Handover:**
- Prepared all necessary technical documentation, test results, and reports for handover to PTCL upon project completion.

CERTIFICATES

- PLC (Programmable Logic Controller) Certificate
- Network Safety Certificate
- Cyber Security Certificate
- Huawei Certification
- Electrical Safety Certificate
- First Aid & CPR Certificate
- Fixed Access Network Hardware Installation Certificate
- General EHS (Environment, Health & Safety) Certificate
- ROBOCOM 12 Certification
- Pakistan Engineering Council (PEC) Certificate – PEC# Electro/20503
- H3C Certificate

PROJECT

INTERNATIONAL PROJECT

Multiples operators project details

Saudi STC TX Project – 2020

Worked on the migration of transmission network equipment, ensuring seamless cutover and minimal service disruption. Responsibilities included coordination with field teams, execution of migration activities, testing, and post-migration validation to meet STC's quality and operational standards.

Project: Saudi STC TX Project – Site 56AODKQ

Worked as part of the transmission team on the migration of legacy transmission systems to upgraded infrastructure at project 56AODKQ. Key responsibilities included pre-migration checks, link validation, equipment configuration, and cutover execution in coordination with STC's NOC. Ensured smooth migration with zero downtime and full post-migration testing.

Project: Saudi STC TX Project – Site 56AONPK

Performed implementation of transmission network equipment at site 56AONPK as part of the STC TX Project. Responsibilities included equipment installation, rack layout & power connectivity, fiber management, configuration, and integration with the live network. Ensured implementation met STC quality standards and was completed within the project timeline.

Project: Saudi Electric Company (SEC) Project

Vendor: Hitachi

Worked on the implementation and commissioning of telecom and control systems for Saudi Electric Company (SEC) in collaboration with Hitachi. Responsibilities included coordination with Hitachi teams, equipment installation, fiber and transmission link testing, configuration, and handover documentation. Ensured that all activities complied with SEC's technical standards and safety regulations.

Project: Saudi STC TX Project – Site 56AOPQK

Involved in the network expansion activities at site 56AOPQK under the STC TX Project. Scope of work included the installation and expansion of subracks, addition of service cards, SFP modules, and related transmission hardware. Ensured proper integration with the existing system, followed by testing, verification, and documentation as per STC standards.

NATIONAL PROJECT

Multiples operators project details

PTCL GPON Deployment Project:

Worked on the implementation and expansion of GPON (Gigabit Passive Optical Network) technology for PTCL as part of their nationwide fiber infrastructure upgrade. Responsibilities included installation and configuration of OLTs (MA5600T series), ONT provisioning, fiber patching, and testing of end-to-end connectivity. Conducted site surveys, ensured EHS compliance, and coordinated with PTCL teams for commissioning and service activation. The project aimed to improve PTCL's FTTH services by delivering high-speed internet, voice, and IPTV over a single optical network.

Project: MSAG Deployment – PTCL Network Expansion

Worked on the deployment of MSAG (Multi-Service Access Gateway) equipment as part of PTCL's access network expansion project. Responsibilities included site surveys, installation, power and fiber connectivity, commissioning, and integration of MSAG cabinets into the existing PTCL network. Coordinated with field teams and PTCL operations for testing, service provisioning, and handover. The project supported the delivery of broadband, voice, and IPTV services by extending last-mile connectivity in underserved areas.

Project: Zong Modernization Project

Participated in the Zong Network Modernization Project, focused on upgrading and optimizing existing telecom infrastructure to support improved performance and future scalability. Responsibilities included the replacement and integration of legacy transmission and access equipment, installation of new hardware, software upgrades, and network reconfiguration. Coordinated with Zong teams and vendors for site readiness, implementation, testing, and cutover activities. Ensured all work was completed in compliance with Zong's technical standards and project timelines.
