

Talha Bhayat

London, UK
+44 7393 026 733
talhabhayat@outlook.com

Versatile developer with expertise in back-end and front-end technologies, complemented by strong DevOps skills in cloud environments. Demonstrated success in utilizing Microsoft stack (C#, .Net, SQL Server, Azure) to build robust applications, while also proficient in React, TypeScript, and RESTful APIs. Experienced in both relational and non-relational database management, focusing on creating efficient user interfaces. Eager to embrace new technologies to enhance project outcomes.

EXPERIENCE

EO Charging, London - *Senior Software Developer*

June 2023 - PRESENT

- Architected and developed distributed, event-driven microservices ecosystem for managing electronic vehicle charging station operations at scale, ensuring high availability and fault tolerance.
- Collaborated cross-functionally with the architecture team to establish technical standards, review designs, and provide expert guidance across multiple concurrent projects.
- Designed and delivered OCPI (Open Charge Point Interface) v2.2 compliant API endpoints, architecting the integration layer and overseeing full implementation lifecycle, enabling bi-directional communication for locations, sessions, tariffs, and CDRs with roaming partners.
- Engineered real-time notification system using Azure SignalR to deliver instant charger status updates to users and operations teams, enhancing system transparency and responsiveness.
- Developed proof-of-concept during company hackathon utilizing Azure OpenAI to parse user stories and automatically generate comprehensive test suites, demonstrating significant potential for QA efficiency improvements.
- **Technology Stack:** C# ASP.NET Core, Azure SQL, Entity Framework Core, Azure SignalR, TypeScript, Next.js, Azure DevOps, Application Insights, Grafana, Microservices Architecture, Event-Driven Design.

AstraZeneca, Cambridge - *Senior Software Engineer*

July 2022 - May 2023

- Engineered robust automation systems for critical laboratory equipment data acquisition, implementing file capture and ETL pipelines that streamlined research workflows, enhanced data integrity, and ensured regulatory compliance with FDA/EMA standards.
- Led full-cycle design and development of collaborative research portal empowering scientists to share real-time research progress, accelerating critical decision-making processes and driving pharmaceutical R&D advancements.
- Developed .NET Core Windows service to automatically capture and securely upload experimental data from specialized lab instruments (BGAs, Osmometers) to AWS S3, eliminating manual data entry and reducing errors.
- Modernized legacy data-driven Windows application by architecting and delivering a contemporary React-based web platform, improving user experience and accessibility.
- Mentored team members on best practices including CI/CD pipelines, Test-Driven Development

(TDD), and comprehensive code reviews, fostering a culture of continuous improvement and quality excellence.

- **Technology Stack:** C# ASP.NET Core, ASP.NET MVC, Windows Background Services, VB.NET, TypeScript, React, REST APIs, Strapi CMS, Meilisearch, AWS S3, Jira, CI/CD, TDD.

Transport for London, London – Senior Software Developer

March 2018 - May 2022

- Delivered end-to-end software solutions throughout the complete SDLC for London's transport infrastructure, ensuring high quality standards and stakeholder satisfaction across multiple projects supporting TfL's digital services.
- Architected real-time bus monitoring API leveraging iBus data via WebSocket connections, providing live vehicle tracking capabilities for operational efficiency and customer information systems.
- Led technical implementation of Ultra Low Emission Zone (ULEZ) integration into the road user charging platform, supporting London's environmental initiatives and enabling automated compliance checking.
- Developed high-availability line status application deployed across London Underground stations, delivering real-time service updates to improve passenger experience.
- Created scalable REST API endpoints powering the TfL Go mobile application, providing real-time arrival predictions and journey planning functionality.
- Built comprehensive React component library establishing design consistency and accelerating development velocity across TfL's digital ecosystem.
- Architected and deployed multiple React-based microsites replacing sections of monolithic legacy platform, improving performance, maintainability, and deployment flexibility.
- Engineered TypeScript Node.js CLI scaffolding tool automating the bootstrap process for new React applications, standardizing project structure and reducing setup time.
- Supported enterprise SSO migration from proprietary implementation to Azure AD B2C, enhancing security and integration capabilities.
- Established Azure DevOps CI/CD pipelines incorporating automated testing, security scanning, and zero-downtime deployments.
- Designed and deployed containerized Docker-based build agents, optimizing build times and infrastructure costs.
- Provisioned and managed Azure infrastructure as code using ARM templates and Azure CLI, ensuring consistency across environments.
- Mentored junior developers and interns on software engineering principles, code quality standards, and professional development.
- **Technology Stack:** C# ASP.NET Core, ASP.NET MVC, TypeScript, JavaScript, React, Webpack, SignalR, REST APIs, MongoDB, CosmosDB, Azure (Blob Storage, App Services, Functions, App Insights, API Management, Front Door, AD B2C), AWS (S3, CloudWatch, Elastic Beanstalk), TeamCity, OpenText/RedDot CMS, CloudFlare, TDD.

Cox Automotive, Debden – Senior Developer

April 2017 - March 2018

- Delivered full-stack solutions encompassing API development, front-end web applications, and mobile app enhancements for vehicle transportation platform serving nationwide dealer networks.
- Ensured PCI DSS compliance by integrating Barclays ePDQ hosted payment gateway, securely processing customer transactions while maintaining industry security standards.

- Integrated MotorSpecs API providing comprehensive vehicle specifications lookup by VRM/VIN, delivering accurate dimensional and weight data to transporters for improved logistics planning.
- Developed seamless integration with Dealer-Auction platform enabling customers to receive instant transportation quotes post-purchase, accept quotes, and automatically activate transport jobs.
- Enhanced Android and iOS mobile applications with new features, API alignment, and critical bug fixes, including offline-capable proof of collection/delivery reports for field transporters.
- **Technology Stack:** C# ASP.NET MVC 4, Web API 1, SQL Server, Knockout.js, Bootstrap, iOS Swift, Android (Java), Git, BitBucket, Trello, Jira.

Community Bug Ltd, London – Senior Developer

January 2013 - April 2017

- Led design and implementation of RESTful API architecture powering The Running Bug website and mobile applications, serving active running community of 100,000+ members.
- Engineered API following SOLID principles with clean separation of concerns using repository and service layer patterns, ensuring maintainability and testability.
- Implemented secure OWIN bearer token-based authentication system protecting user data and API endpoints.
- Optimized application performance by implementing Redis caching strategies and Azure Service Bus for asynchronous processing, reducing response times by 60%.
- Enhanced search functionality by integrating Apache Solr, delivering fast, relevant results across large content repositories.
- Integrated multiple third-party APIs including Facebook OAuth, Google Maps for route visualization, Google Analytics for insights, and PayPal for payment processing.
- Executed multiple successful client marketing campaigns driving brand awareness and product engagement.
- **Technology Stack:** C# ASP.NET, Web API 2, SQL Server, Apache Solr, StructureMap (IoC), Azure Service Bus, Redis, AutoMapper, Dapper, PetaPoco, Elmah, Log4Net, JavaScript, jQuery, NUnit, SpecFlow, TeamCity, Octopus Deploy, CircleCI, Swagger, Git, SOLID Principles.

Adventure001 & Hillmotts, Denham – Web Developer

June 2011 - December 2012

- Developed and maintained voucher-based booking platforms for luxury helicopter experiences and spa retreat services.
- Designed and implemented fitness boot-camp booking system with hybrid Classic ASP back-office for staff and ASP.NET WebForms customer-facing interface.
- **Technology Stack:** ASP.NET WebForms, ASP.NET MVC, Classic ASP, SQL Server.

Victoria Forms, Bury St Edmunds – Web Developer

January 2011 - June 2011

- Enhanced electronic forms software serving local government authorities, improving efficiency and user experience.
- Implemented UK bank account validation using Vocalink specifications ensuring accurate payment processing.
- Integrated Postcode Anywhere API for automated address lookup functionality.
- **Technology Stack:** Classic ASP, SQL Server.

Bentley Systems Ltd, Sheffield – Software Developer

October 2007 - February 2009

- Developed demonstration version of design database software showcasing product capabilities to prospective clients.
- Created data manipulation toolsets using VB6 and MS Access for HVAC design components (pipes, fittings, radiators).
- Internationalized software with metric/imperial unit conversion supporting multiple regional markets.
- Implemented ASHRAE-compliant calculations for American market expansion, including complex thermal and fluid dynamics computations.
- **Technology Stack:** VB6, MS Access, Crystal Reports 8/9.

EDUCATION

University of Sheffield, UK – *BSc Computer Science*

2:1, Upper Second Class Honours – 2007
