Solution-oriented Full-Stack Software Engineer with **4 Years** of experience in developing & delivering high-quality, scalable enterprise web applications with **strong problem-solving & debugging skills**. I take **100% ownership** of the task (R&D, POC, Development & Deployment) & **pay attention to details**. Interested in **solving challenging tasks & learning new technologies**.

Skills

Proficient With: Node.js, Express.js, MongoDB, RESTful API Design & Development, Angular, React, TypeScript, JavaScript, JWT, OAuth 2.0 Object Oriented Programming, Data Structures & Algorithms, Mongoose, SQL(MySQL/PostgreSQL), BullMQ, Redis, Docker AWS, Web Sockets, NgRx, Redux, RxJs, HTML, CSS, SCSS, Tailwind CSS, Bootstrap 5, DaisyUI, Material UI, Java, Git

Familiar With: GitHub Actions, CICD, Kubernetes, Microservices, RabbitMQ, Electron.js, Next.js, Web Animation API, C, C++, Python

Work Experience

Full Stack Developer - Tromboo Tech Services WLL, Doha, Qatar

April 2023 – Feb 2025

Core Tech Stack: Node.js, Express.js, MongoDB, Mongoose, JWT, Angular, TypeScript, AWS, SCSS, Bootstrap & other NPM utility packages

- Worked as a **founding software engineer** for the **SuperFitout** project, translating business requirements into scalable, production-ready features by **implementing all functional and non-functional requirements** from the ground up as per design documents reported to CEO.
- Bootstrapped core codebase, designing initial architecture & project structure to ensure **maintainability, scalability & rapid development**.
- Built **RESTful APIs & Services** to **responsive UI** across the project with **end-to-end functionality implementation** as per business logic.
- Engineered a robust and configurable application-level file **attachment service for AWS S3 bucket**, managing diverse file types with custom constraints across **80 - 100 file upload controls** in **user/admin modules**, thereby **reducing efforts by over 90%**.
- Build a secure **backend authentication** using **JWT access/refresh tokens** to restrict API access & auto re-login using refresh token.
- **Automated 30 - 50 event-driven dynamic emails** to streamline end-user and admin communication for operational efficiency.
- **Built 40 - 60 Template Driven/Reactive Forms** with custom **frontend (Angular)** and **backend (Mongoose)** validations, minimizing unnecessary API calls, **reducing server load**, and achieving a faster feedback loop/error detection.
- **Led Search Engine Optimization (SEO) initiatives** by implementing **robots.txt, sitemap.xml, site.webmanifest**, meta tags/Open Graph protocol, and schema markup for crawlers, significantly **improving SERP visibility** on Google and Bing ([View head tag Contents](#)).
- Maintained **technical documentation** on Confluence, optimised both frontend & backend application performance for speed & scalability

Software Engineer - VectoScalar Technologies Pvt Ltd, Noida, India

April 2021 - Aug 2022

Core Tech Stack: React, Electron.js, TypeScript, JavaScript, Tailwind CSS, SCSS, Web Sockets/Socket.io, Web Animation API, MobX-State-Tree

- **Developed 30 - 40 interactive PokerBaazi** (India's biggest gaming platform) **game components** for a cross-platform Electron desktop app, having more than **50 lakh player base**, enhanced user experience through dynamic themes and animations ([Watch Video of Application](#)).
- Developed modular, reusable React components, along with implementing **MobX-State-Tree state management** across the application.
- Integrated **real-time WebSocket event streams** to trigger responsive UI and animation updates on the game table.
- Created game animations using the web animation API and **integrated with WebSocket events** to perform UI actions on the game table.
- Fixed **30-50 performance and stability issues**, optimizing responsiveness, **CPU & memory usage metrics**, and gameplay experience.
- Mentored a **cohort of 40 interns** on TypeScript, React, SCSS, Analysis & Designing Aspects, Application State Management, Routing, etc.

Software Engineer Intern - VectoScalar Technologies Pvt Ltd, Noida, India

Jan 2021 - Mar 2021

Core Tech Stack: React Native, React, JavaScript, TypeScript, CSS, SCSS, Redux, React Router, Material UI, Styled Components

- Worked on **code refactoring** across the project to enhance the codebase quality & developed **10 - 20 React UI components**.
- Found & solved **50 - 100 bugs** of the **Sentry, es-lint**, WebStorm errors & warnings, UI bugs, etc

Personal Projects

Dev Tools Studio - [YouTube Video](#) | [Frontend](#) | [Backend](#) | [Architecture Diagrams](#) | [Project Board](#) | [Postman API Collection](#) | [GitHub Repos](#)

Core Tech Stack: Node.js, Express.js, MongoDB, Angular, Mongoose, NgRx, Typescript, BullMQ, JWT, Zod, Docker, AWS, GitHub Actions

- Bootstrapped frontend & backend project setting up ts-node-dev, typescript for backend, **docker containerization**, **AWS SDK V3**, **GitHub Actions for CI/CD with self-hosted runners**, swagger, winston/morgan loggers, **reCAPTCHA**, **helmet**, **API rate limiters**, user-agent parser, postman, dev & prod environments, **NgRx**, setting up Angular Interceptors & Route Guards, handling cookies/caching mechanism, etc.
- Integrated **BullMQ** & built the architecture of **BullMQ queues and workers for job scheduling**, supported by Redis Cloud DB for metadata.
- Created a **real-time CI/CD pipeline** to deploy new GitHub changes automatically on **code push events** by building & publishing the **Docker image on Docker Hub** and using the **GitHub-hosted & self-hosted runners on AWS EC2 instance**.
- Created CRUD APIs for **email credentials, templates, attachments**, and **Authentication/Authorization** features along with UI in Angular.
- Build RESTful API's & UI for **sending scheduled or real-time emails** with **chosen email credentials and customizable email templates**.
- Architected a **well-structured express backend codebase**, segregating controllers, routers, middlewares, **standardizing API success/error responses**, and versioning API endpoints, **Zod schema validation middlewares**, typescript interfaces, and other utility configurations.
- Build a System to track request IP for **static map image with custom marker and device details** to send real-time security updates to users.

Achievements

- StackOverflow **1800+** Reputations, **4,00,000+** people reached Impact, **60+** Answers, **30+** Badges - [View StackOverflow Profile](#)
- Found a bug in the **Electron.js (118K Stars & 16.4K Forks)** framework, reported on GitHub - Issue [#30277](#)
- AWS Certified Cloud Practitioner: [View Digital Badge](#), [View Certificate](#), [View Exam Result](#)
- Solved **500+** Problems on [LeetCode](#), [HackerRank](#), [CodeChef](#), and an active community contributor on [GitHub](#) & [StackOverflow](#)
- Completed Courses on **Microservices with Node JS & React**: [View Certificate](#) & **100xDevs Full Stack Web Development**: [View Certificate](#)

Education

Jamia Millia Islamia, New Delhi, India - Master of Computer Applications (8.68 CGPA)

June 2018 - June 2021

University of Kashmir, J&K, India - Bachelor of Computer Applications (71.47%)

June 2014 - June 2017
